

How technology can simplify your mixing and degassing process

Mixing materials made easy with the versatility of a planetary mixer.

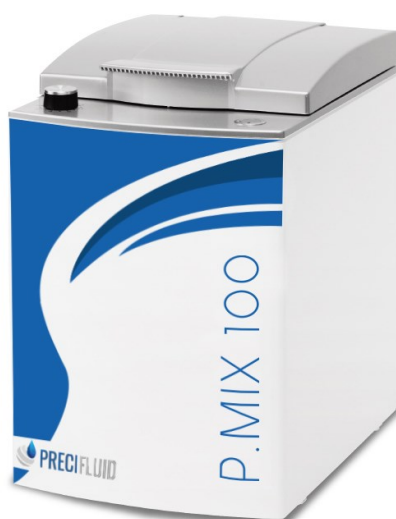

A centrifugal planetary mixer is an automatic machine designed to rotate and pivot a container of materials for the purpose of mixing the materials and removing any air.

The purpose of this equipment is that it is designed to mix and degas in one programmable machine.

By placing the materials in the container, the revolution and rotation can be performed simultaneously.

[Discover the range](#)

The P.Mix 100 guarantees a lump-free, homogenous and perfect mixing for precision dispensing.

With the P.Mix 100, you have in your hands a compact and efficient mixing device for all types of adhesive and resin: silicon, inks, solder pastes, PU resins, epoxy resins, paint ...

**Planetary mixers have many advantages
over traditional mixing and degassing equipment :**

They retain the composition and
preserve the component

The equipment is
very easy to use

Time and cost saving of your manufacturing process
